

Paint Book

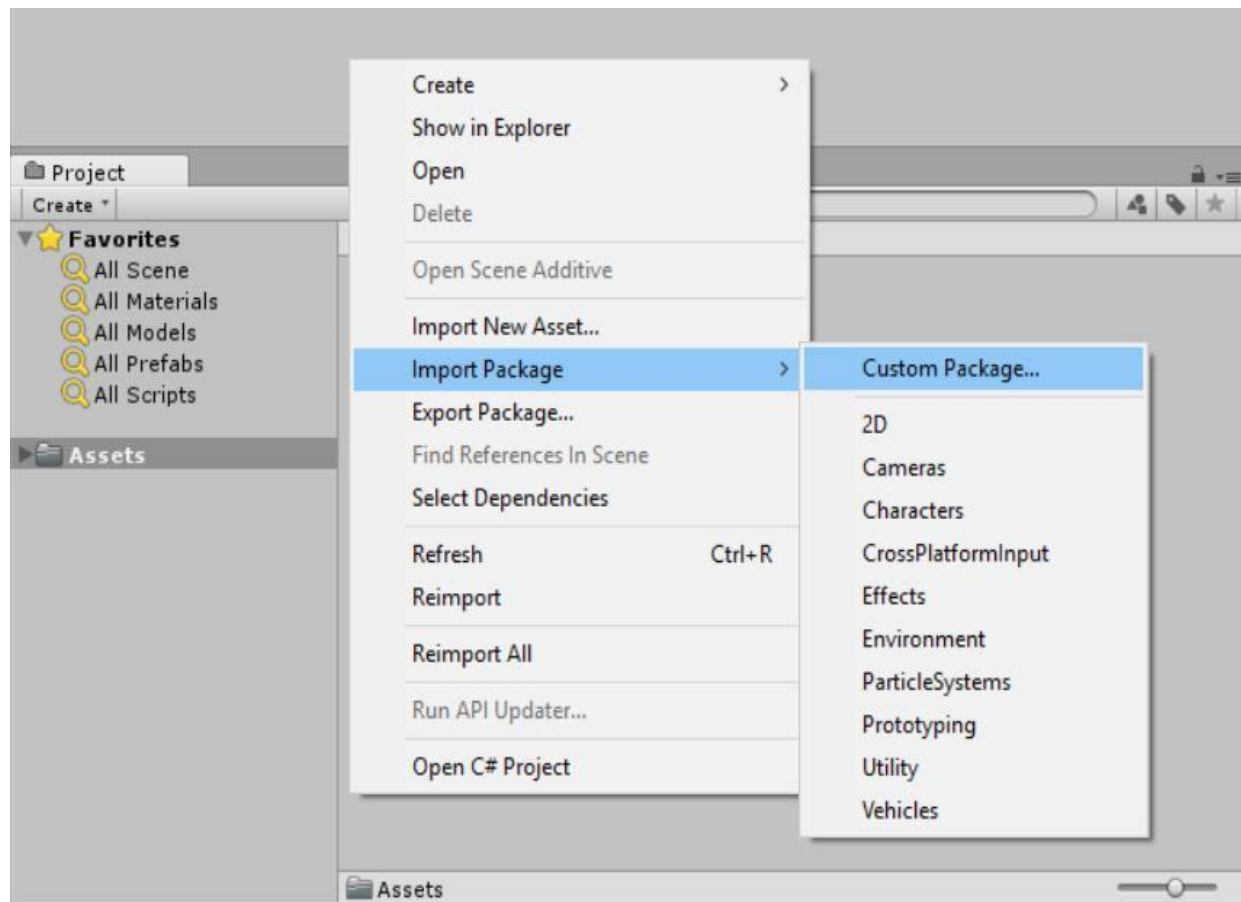

Thank you for purchasing the “**Paint Book**” game template. This is a full Unity template that gives you a quick and easy way to create a simple arcade game or can be used as a starting base to learn Unity and C# programming.

This game can be built for android, iOS & Windows Phone.

It is strongly recommended to import this package in an empty project.

Create a new 2D Unity project and import this template.

VERSION HISTORY

Version 1.0

- Initial release.

BUILD SETTINGS

Make sure you have added these scenes.

How To Play:

In this game, you just have to choose the color that you want to use and then touch on the sections that you want to color to paint it.

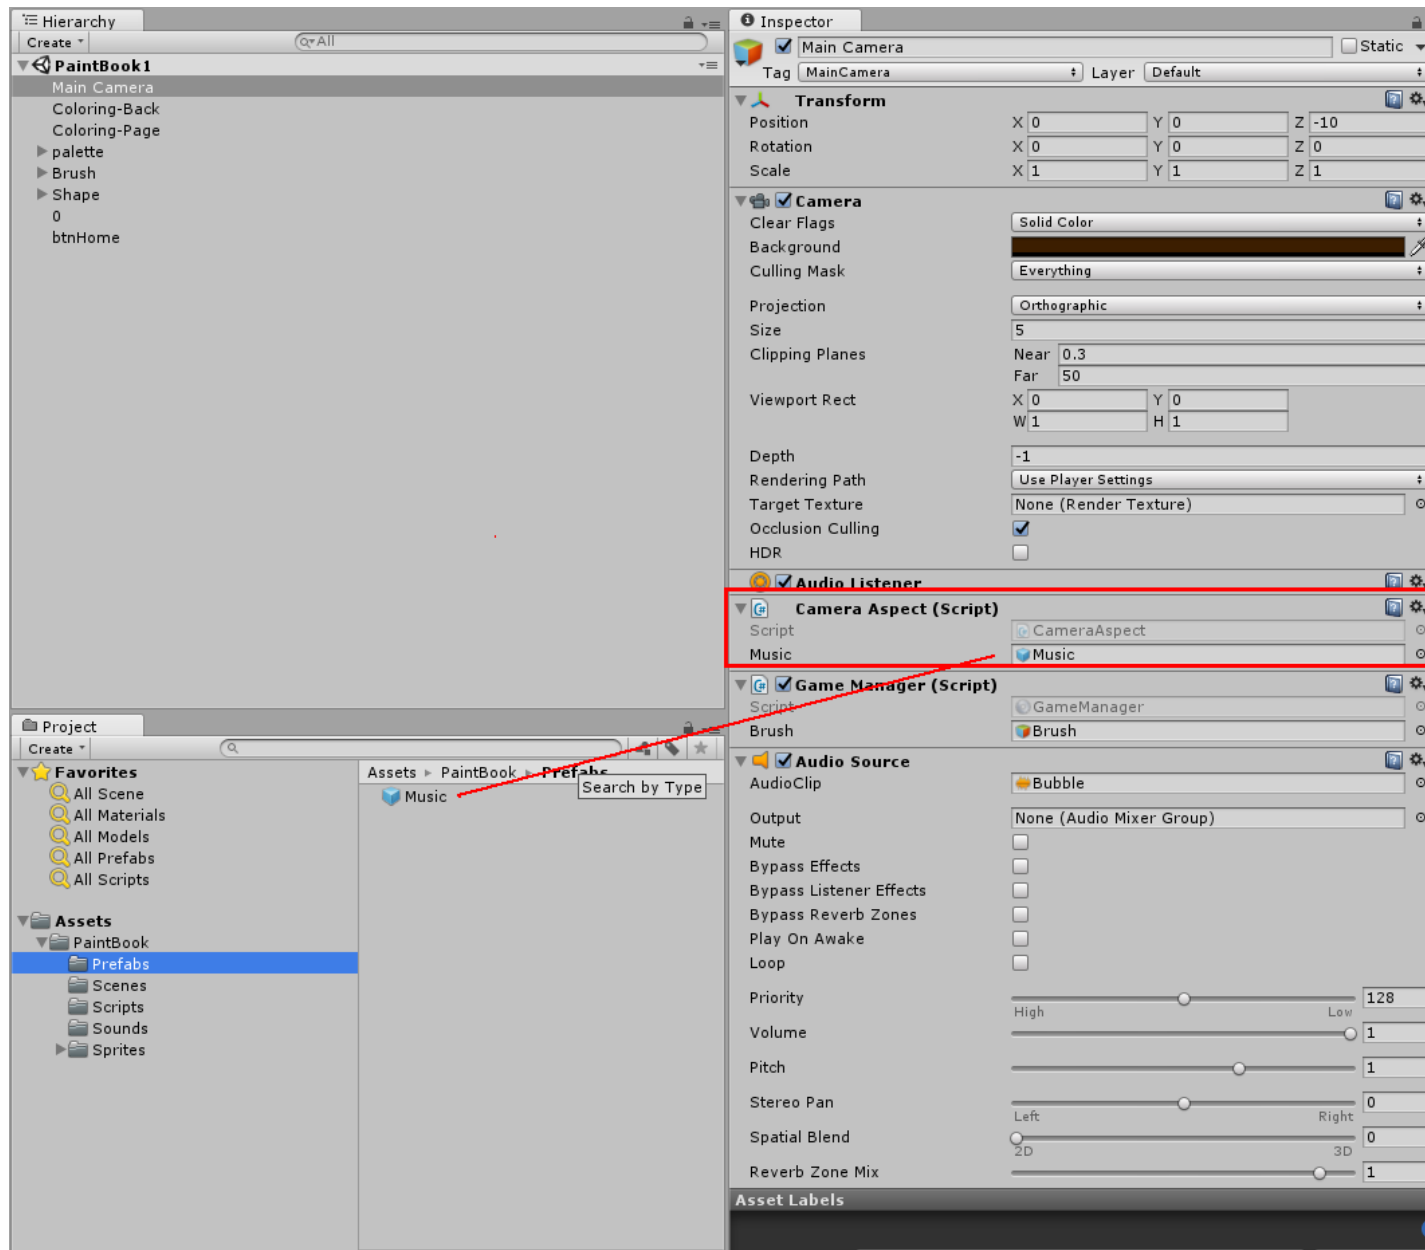

Scripts:

All scripts are under Scripts folder.

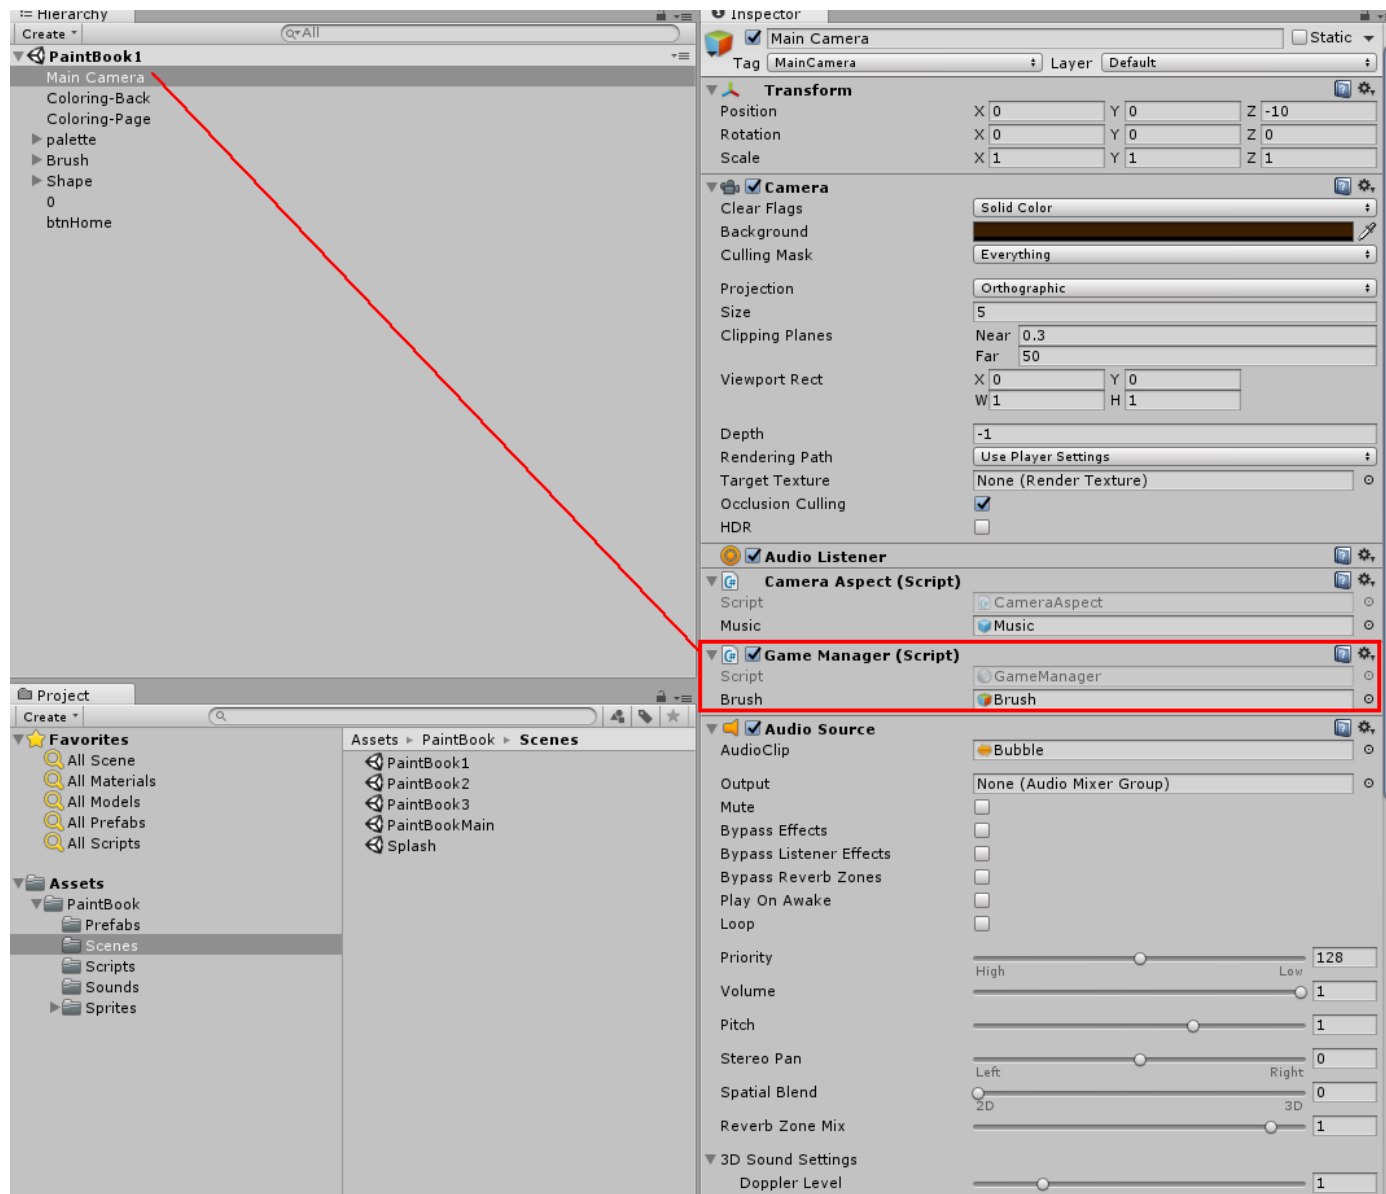

CameraAspect.cs

A very simple script to set aspect of camera for any resolution. Music playing is also related to this script. And this script is connected to game object Main Camera.

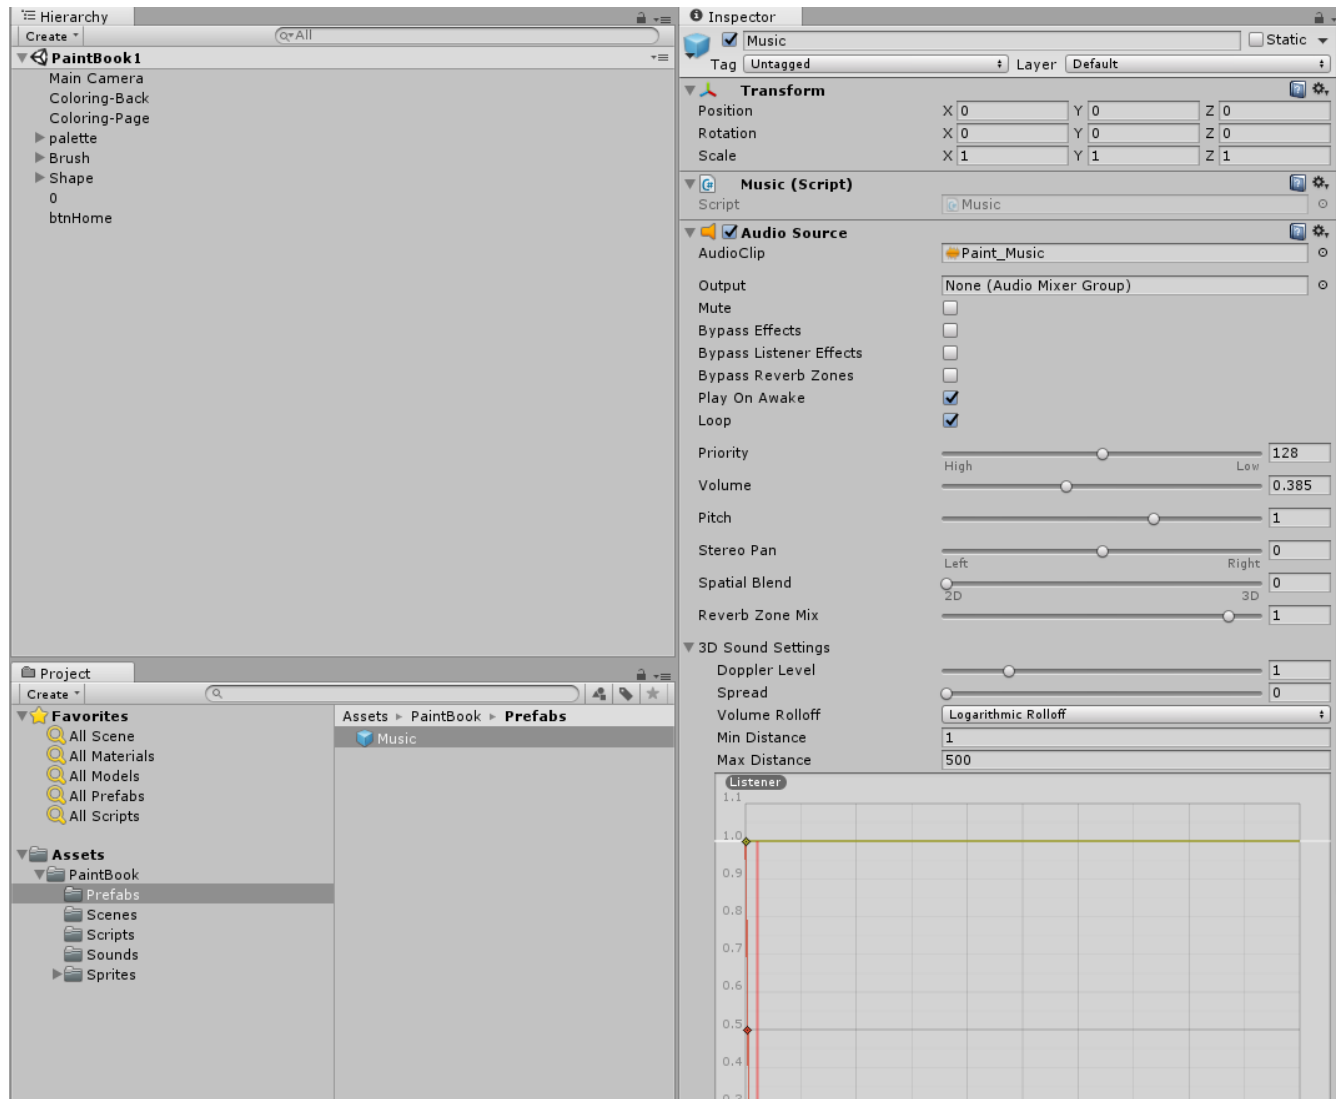

GameManager.cs

This script is connected to game object Main Camera and identifying color bucket, its movement by click or touch, playing coloring sound, choosing color and also the codes for coloring are all done by this script. To change the coloring sound you need to change the value of AudioClip in AudioSource which is connected to game object Main Camera to the sound that you want.

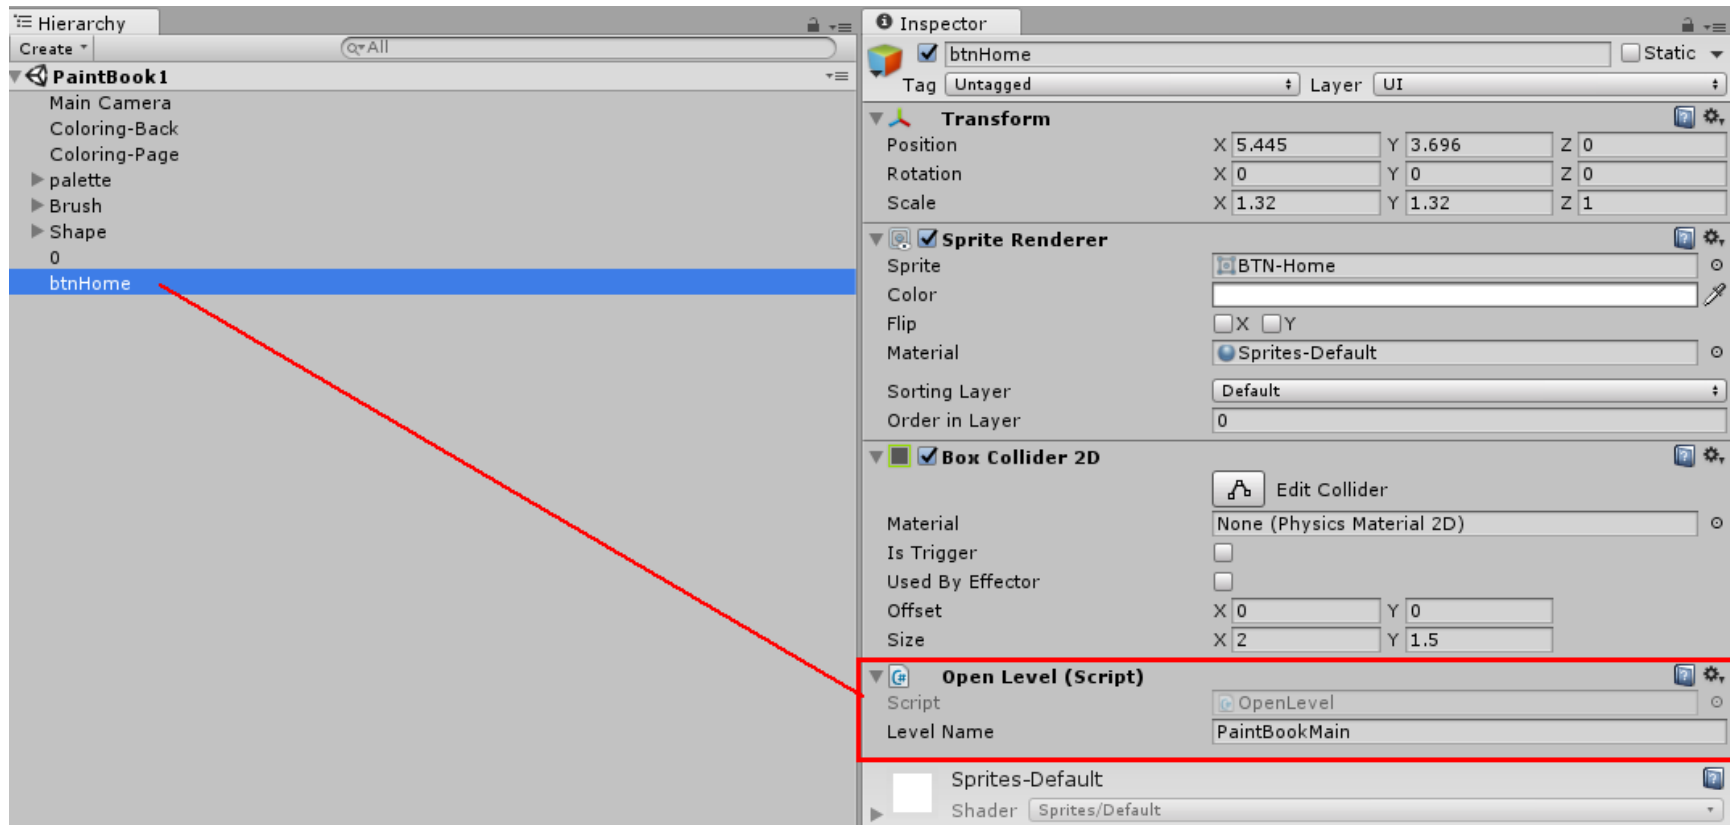

Music.cs

This is connected Music prefab in Prefabs folder and is for preventing music from being stopped when the scene is changed (it makes the music continue playing after scene is changed). You can change the game's music by changing the value of AudioClip in AudioSource section.

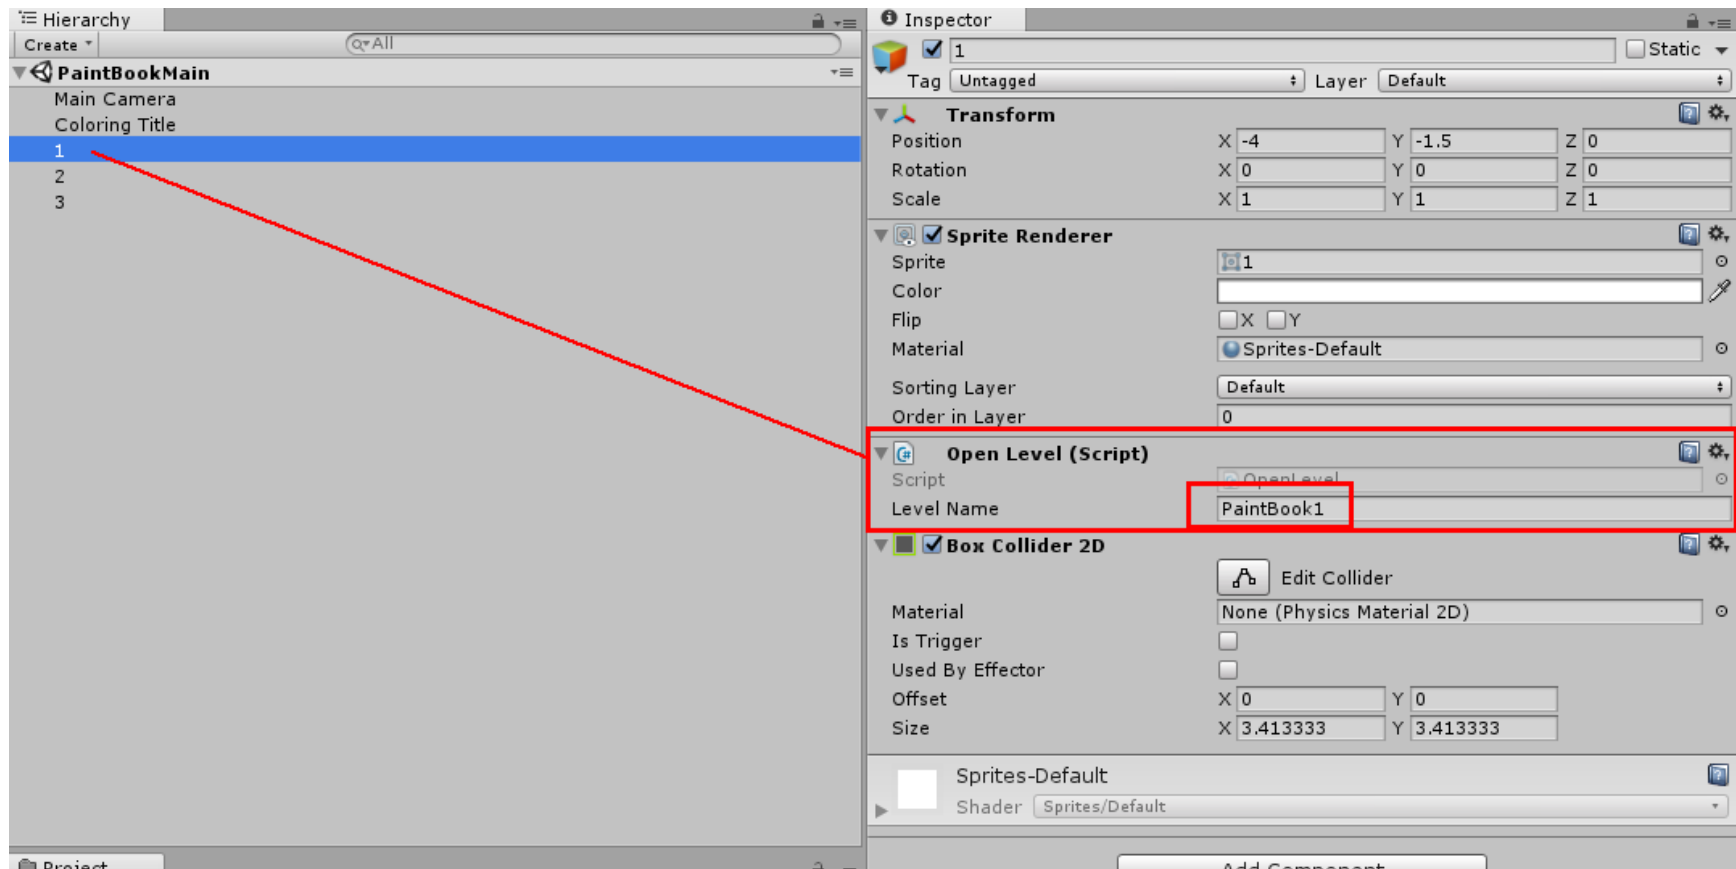

OpenLevel.cs

This script is connected to game object btnHome in scenes PaintBook1 to PaintBook3 and is used for returning to menu. In Level Name field, you need to click on the name of the scene that you want to enter.

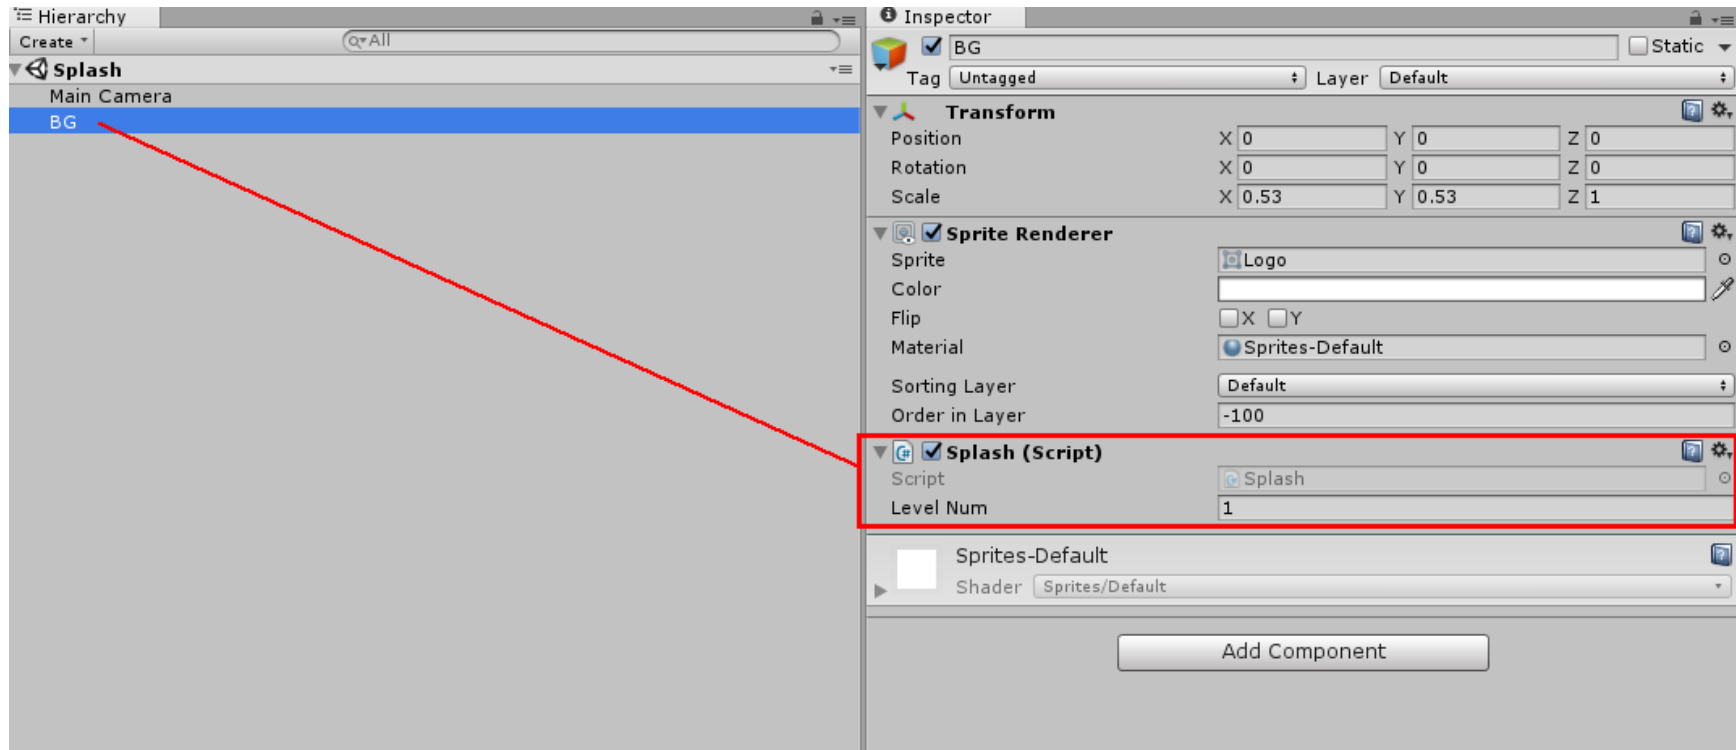

Also in PaintBookMain, scene is connected to game objects 1 to 3 and is designed to enter 3 different sections of paint book.

Splash.cs

The effect for logo in splash section and also when entering the game's menu. This script is connected to game object BG in Splash scene.

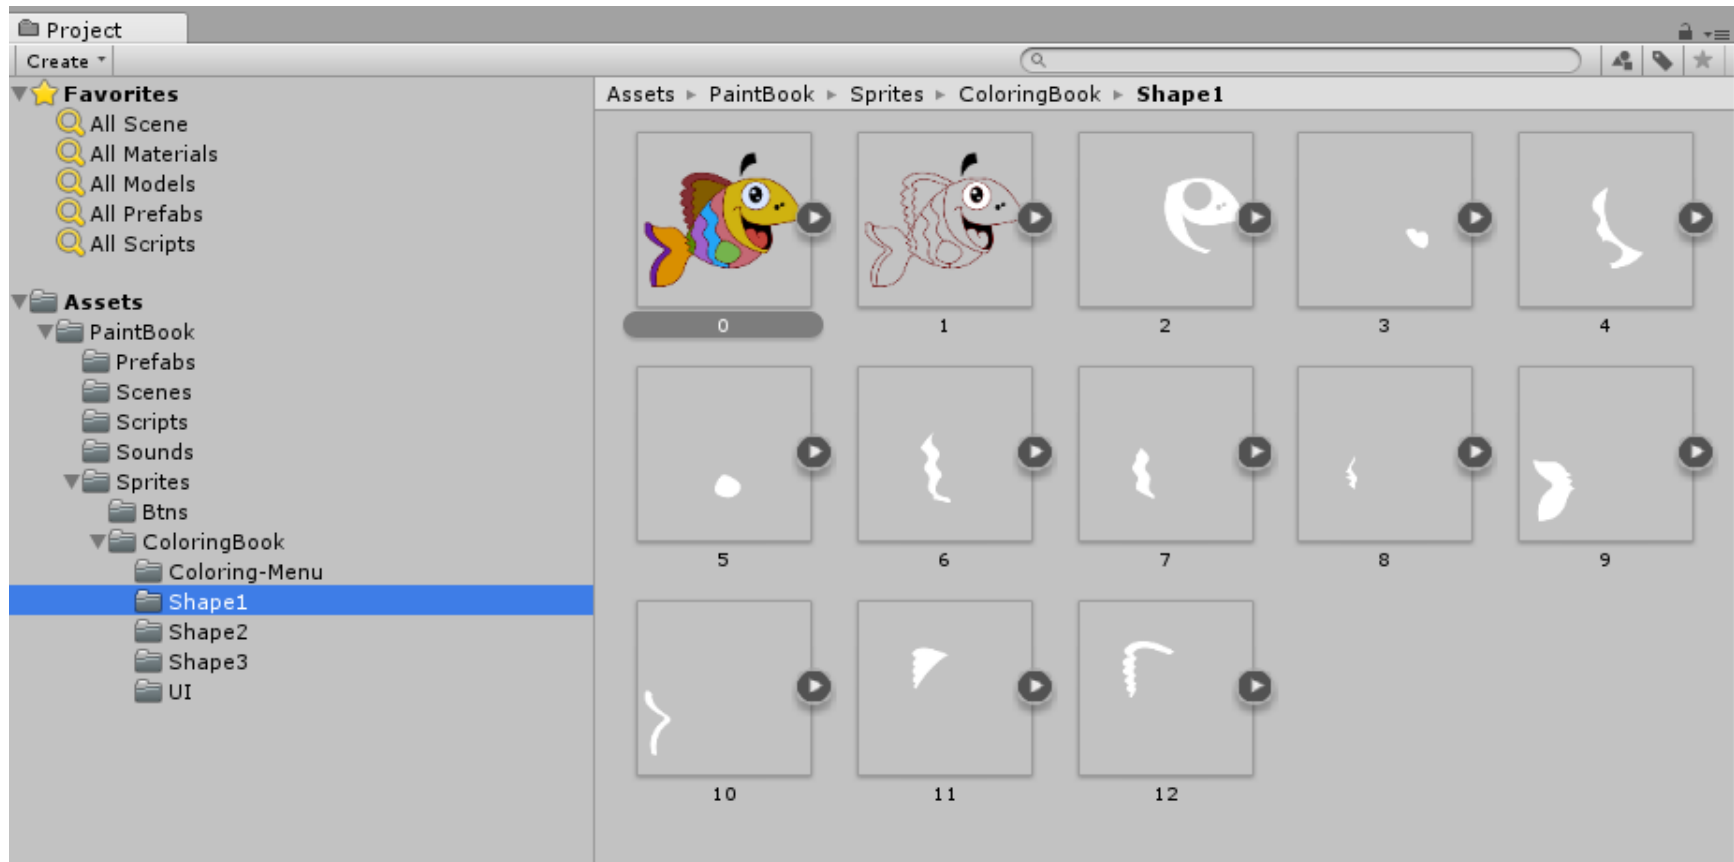

Music and FXs:

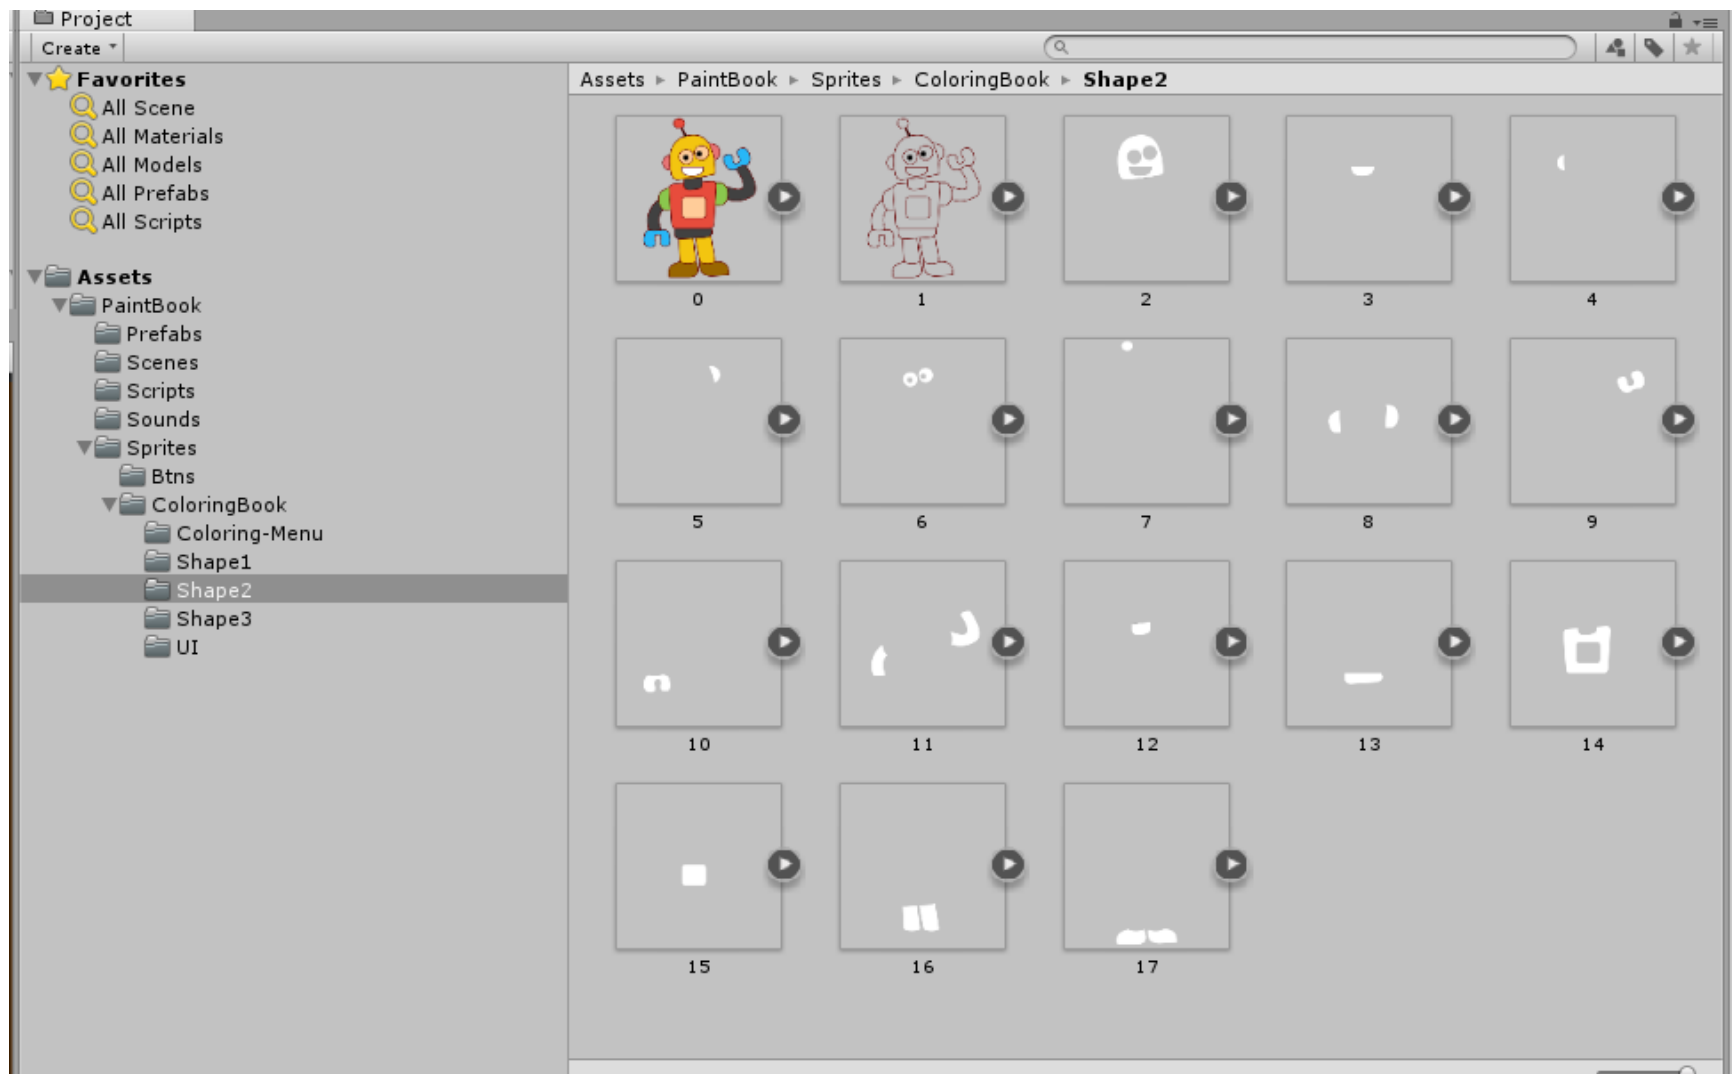

To change the collusion sound and game's music, replace the files in the Sounds folder with the new ones that you want (keep the files' names exactly as before).

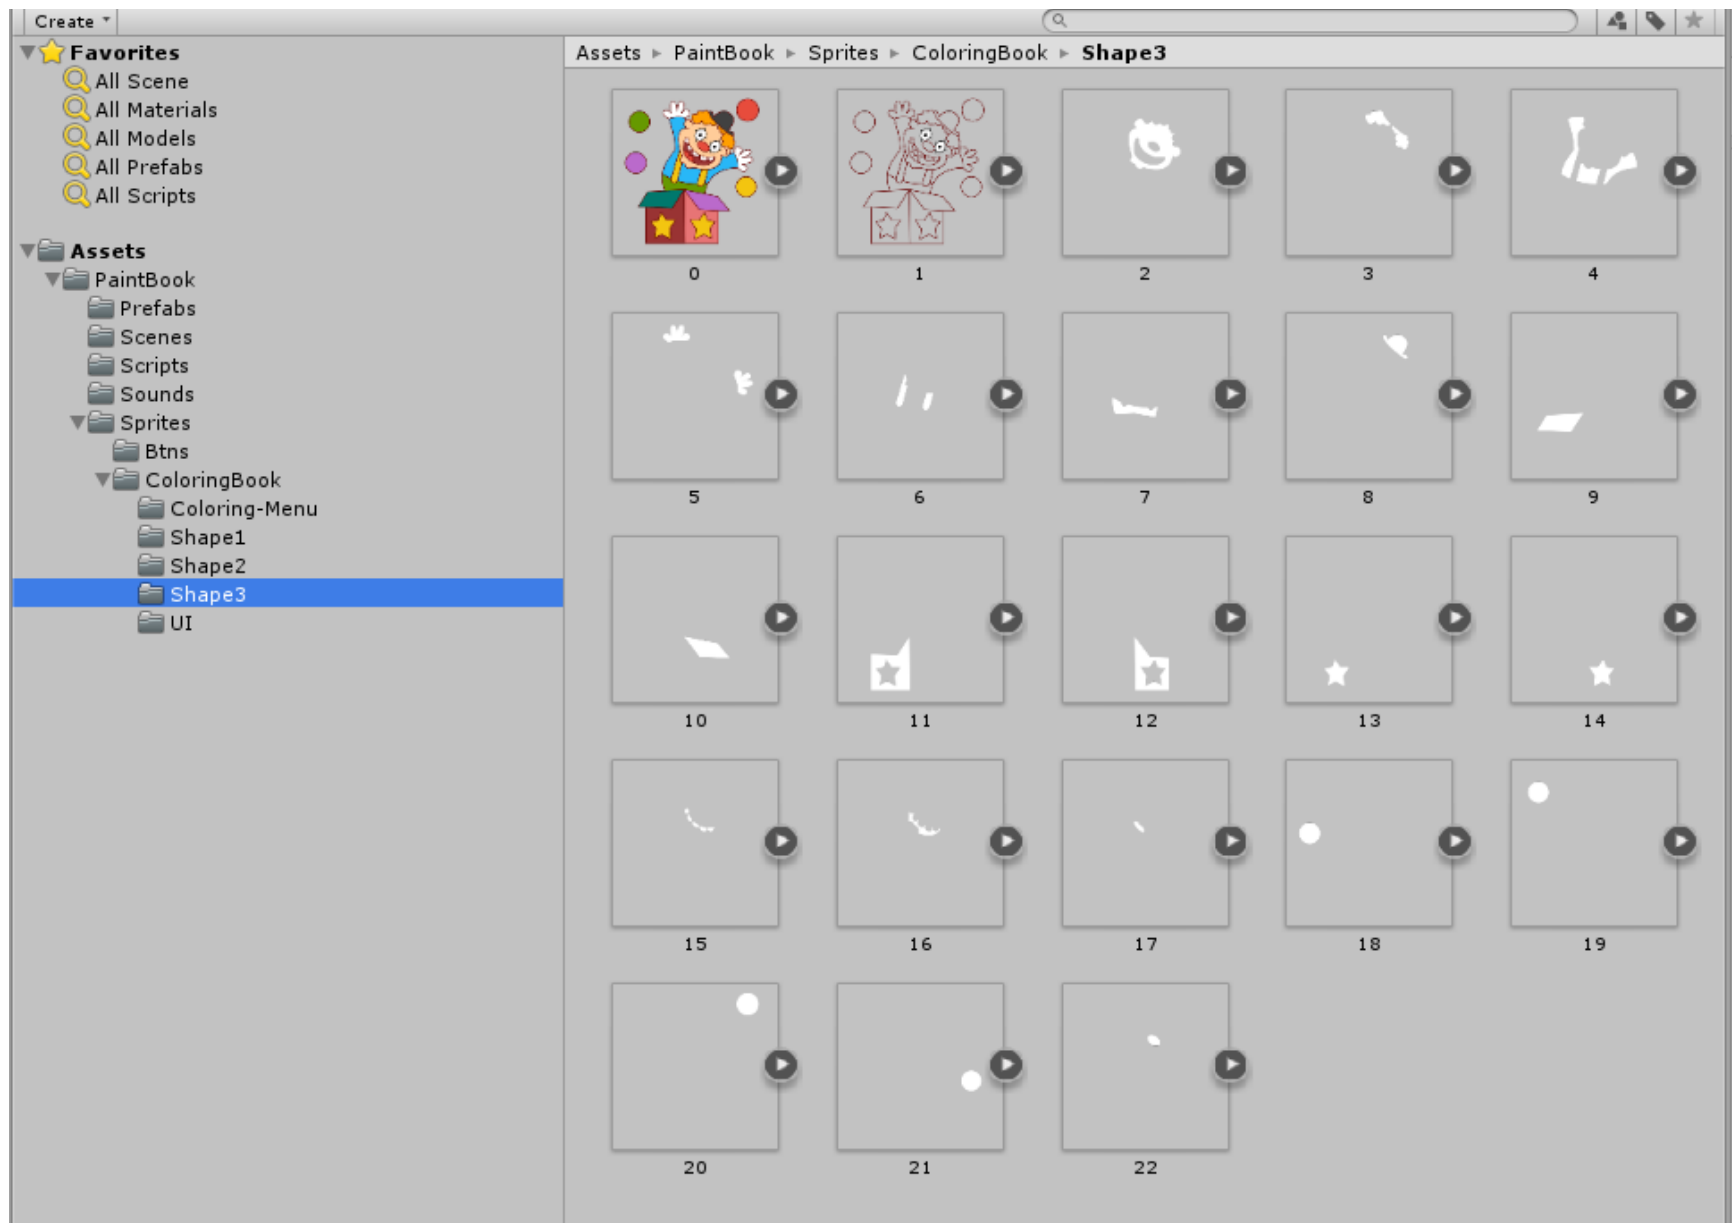

Reskin:

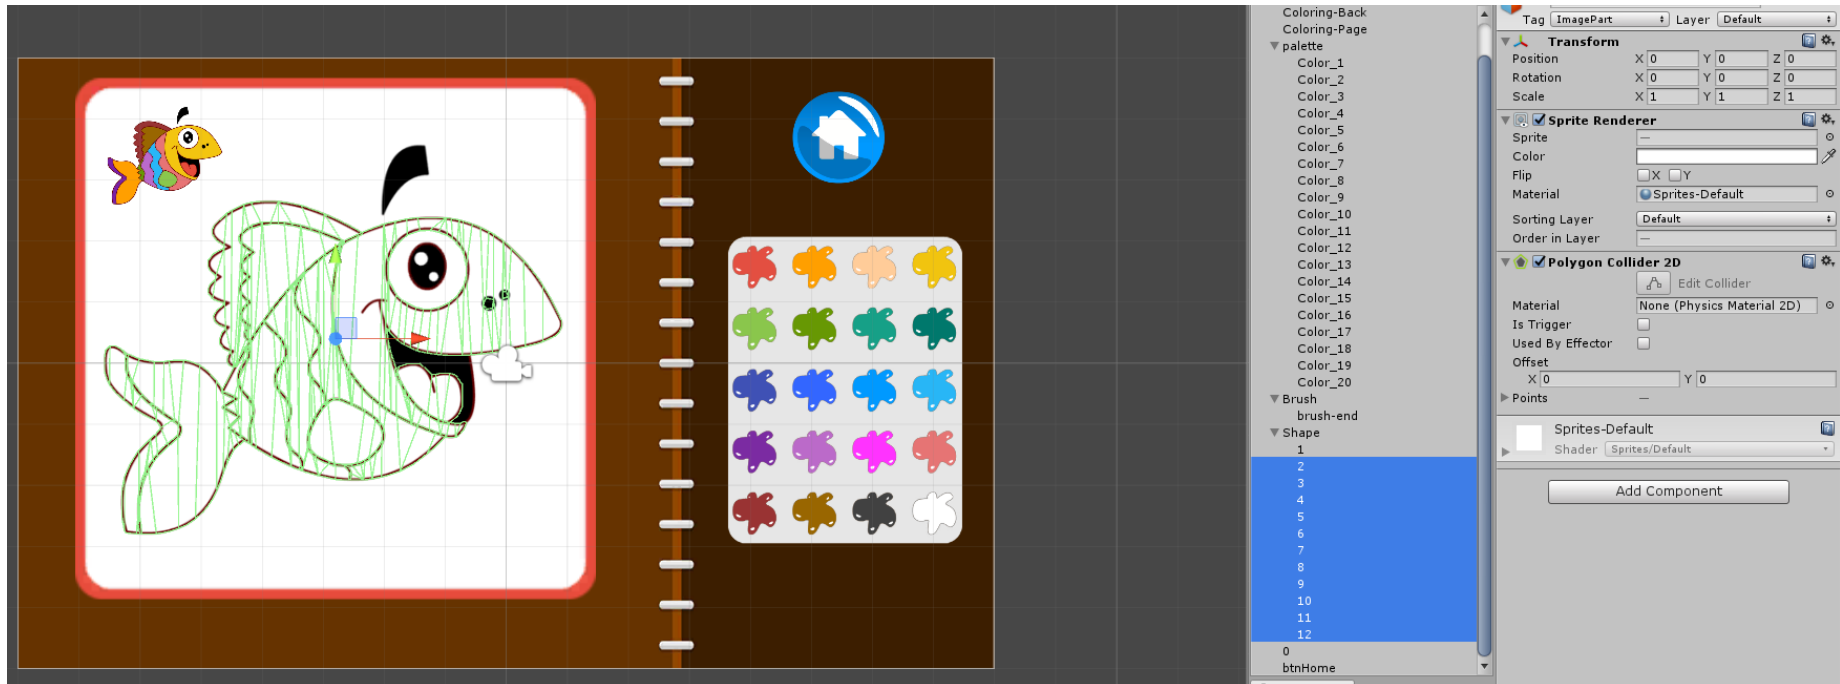

To change the images used for coloring, you need to divide the images to smaller parts, like below:

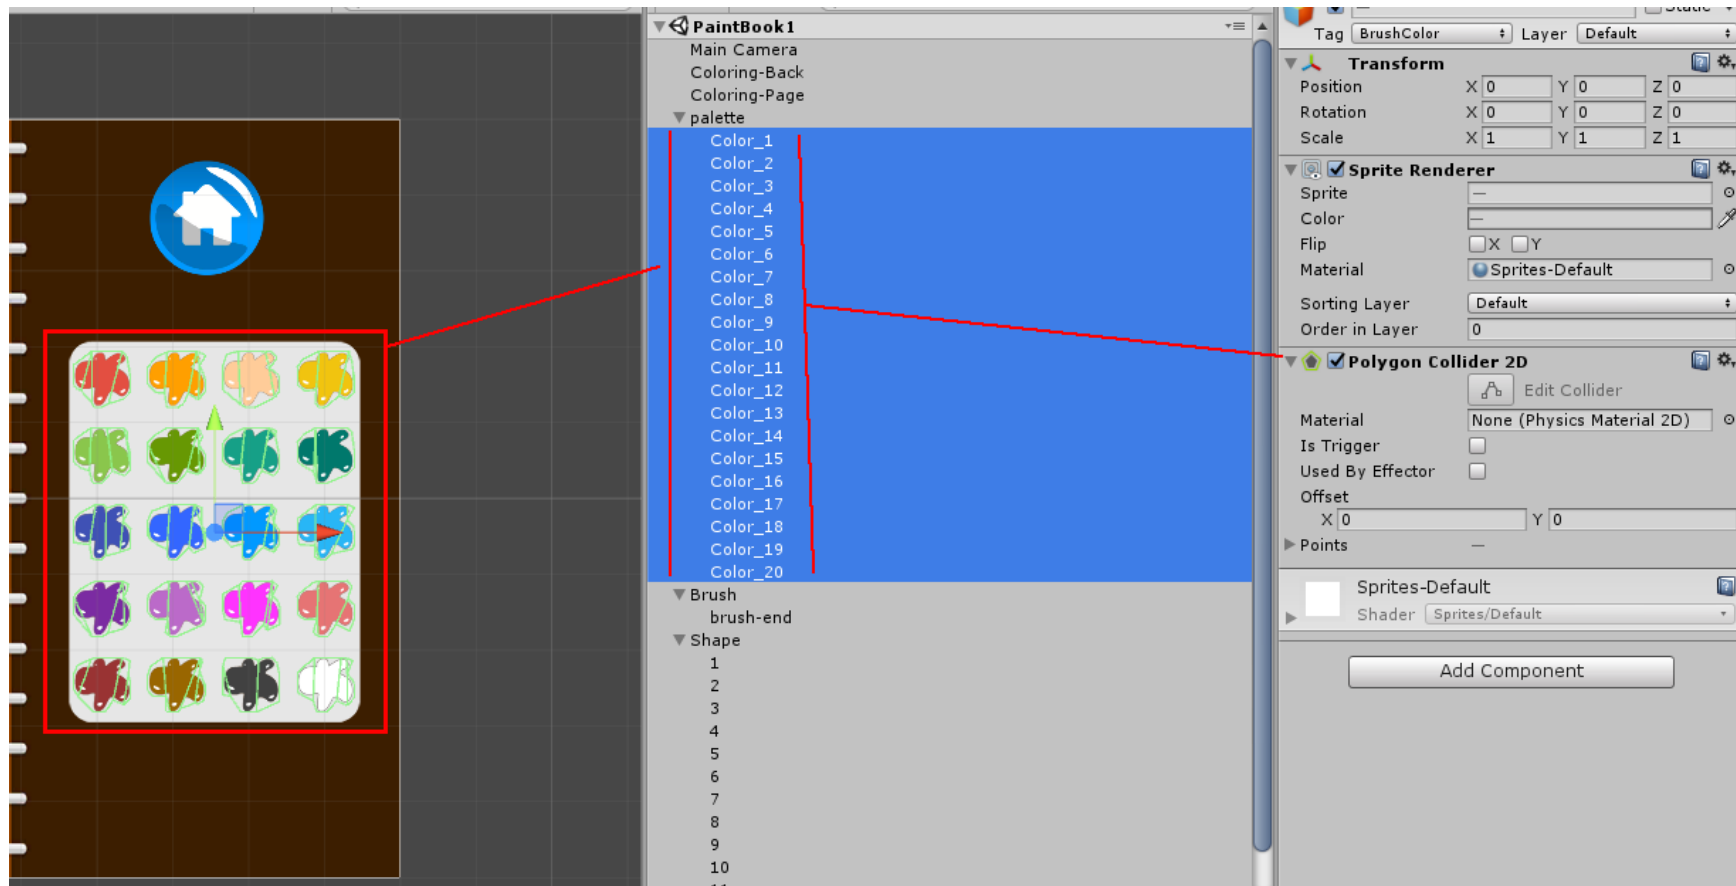

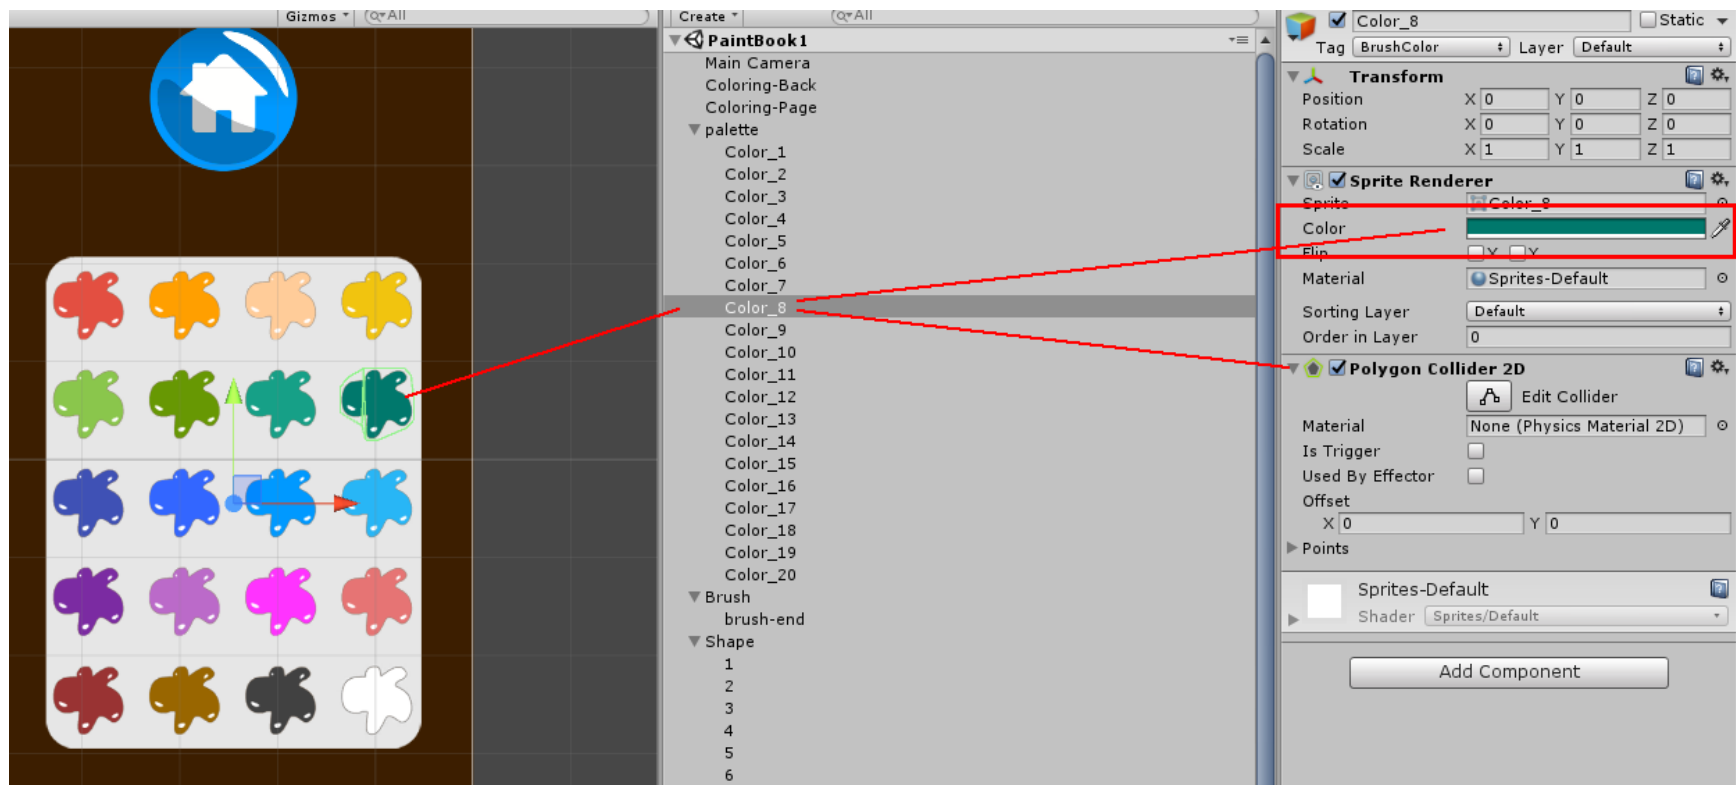

And each part should be placed in the right place in the related scene and Polygon Collider 2D should be connected to each part, like the below image:

To change the color selection part, each part should have Polygon Collider 2D and also Color section from Sprite Renderer should have the value of the color of that sprite, like the below images:
